Alexander Agung Raya

Portofolio

HELLO,

I am a software engineer based in Indonesia with hands-on experience building and maintaining scalable software systems. I enjoy exploring different technologies and solving real-world problems through clean, efficient, and maintainable solutions.

I have worked across multiple domains, adapting quickly to new challenges and delivering practical results. I am comfortable working with modern development tools and continuously improving my skills to stay relevant in a fast-evolving tech landscape.

I am fluent in Indonesian and English, and currently learning Chinese.

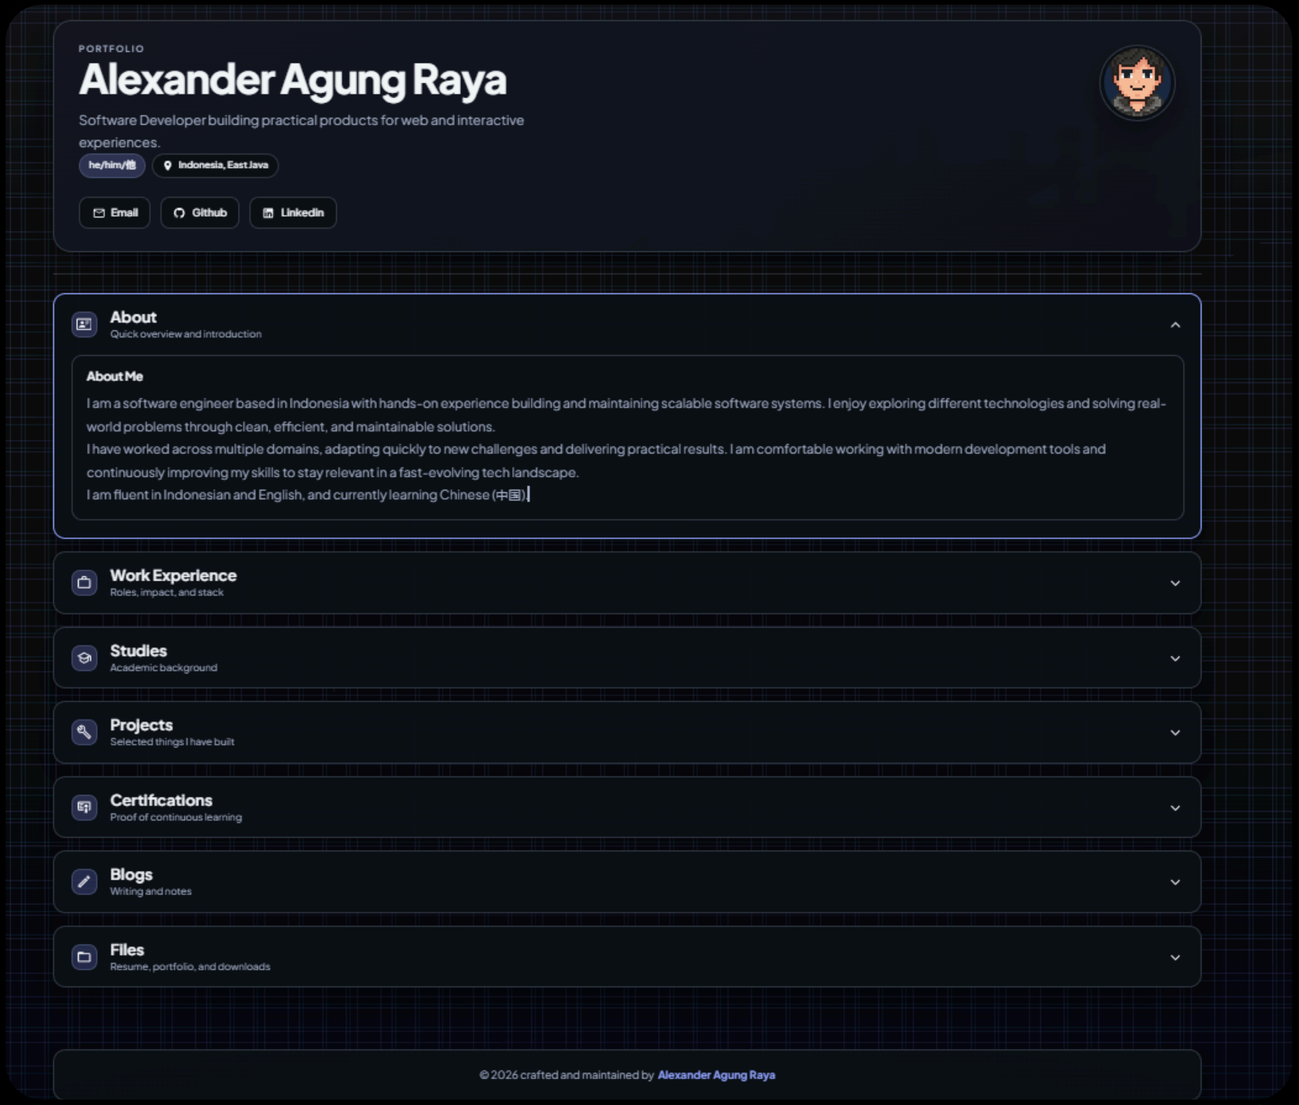
Django, Python, PostgreSQL

Projects

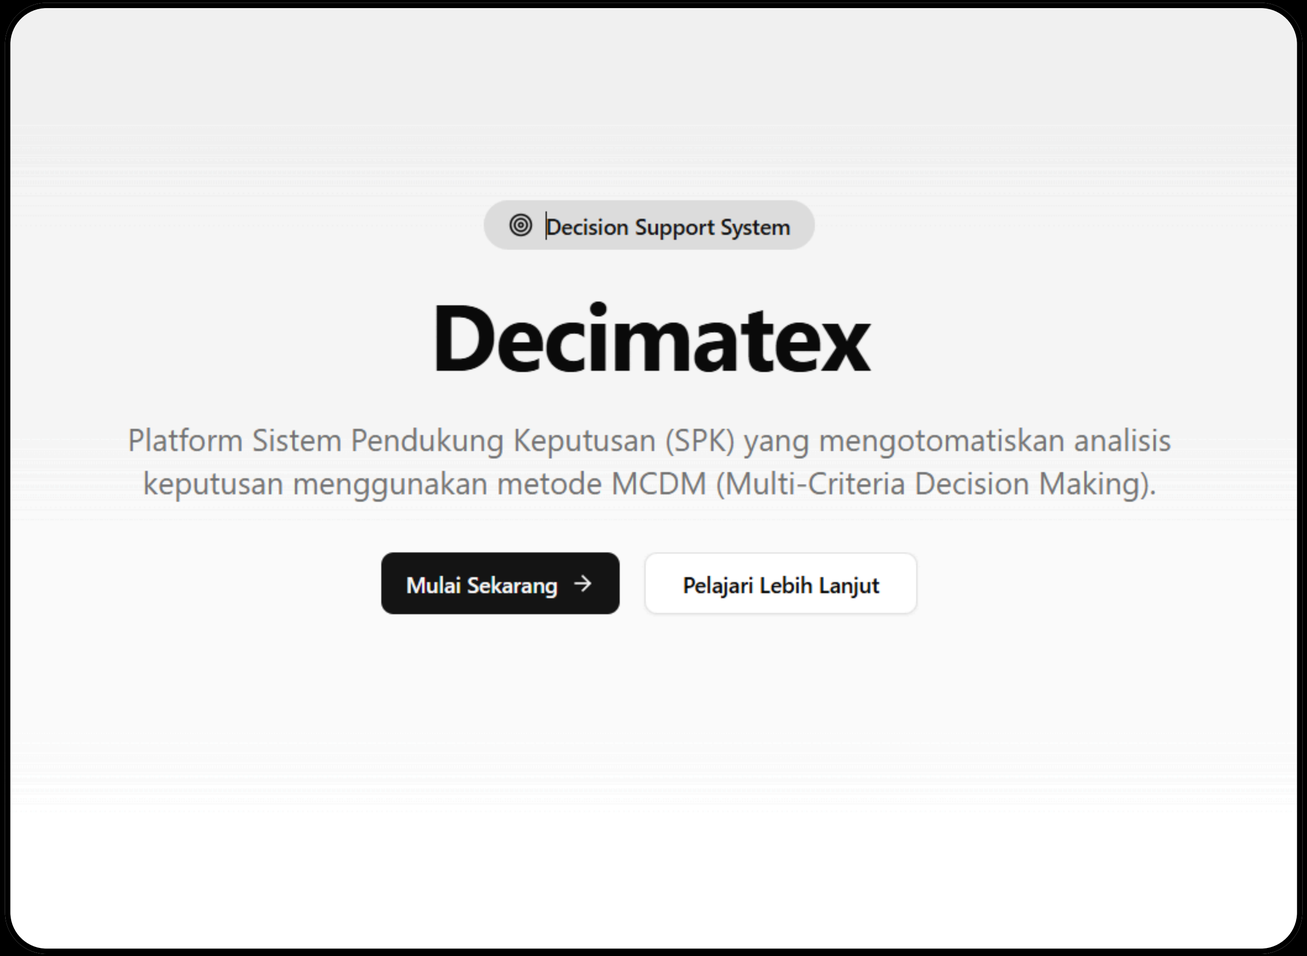
Alex Website Portofolio

This personal portfolio is a total overhaul of my old website, built using Astro, Svelte, Tailwind CSS, and Bun. I designed it to be fast, clean, and easy to navigate, so visitors can quickly get a feel for my projects, skills, and journey as a software developer.



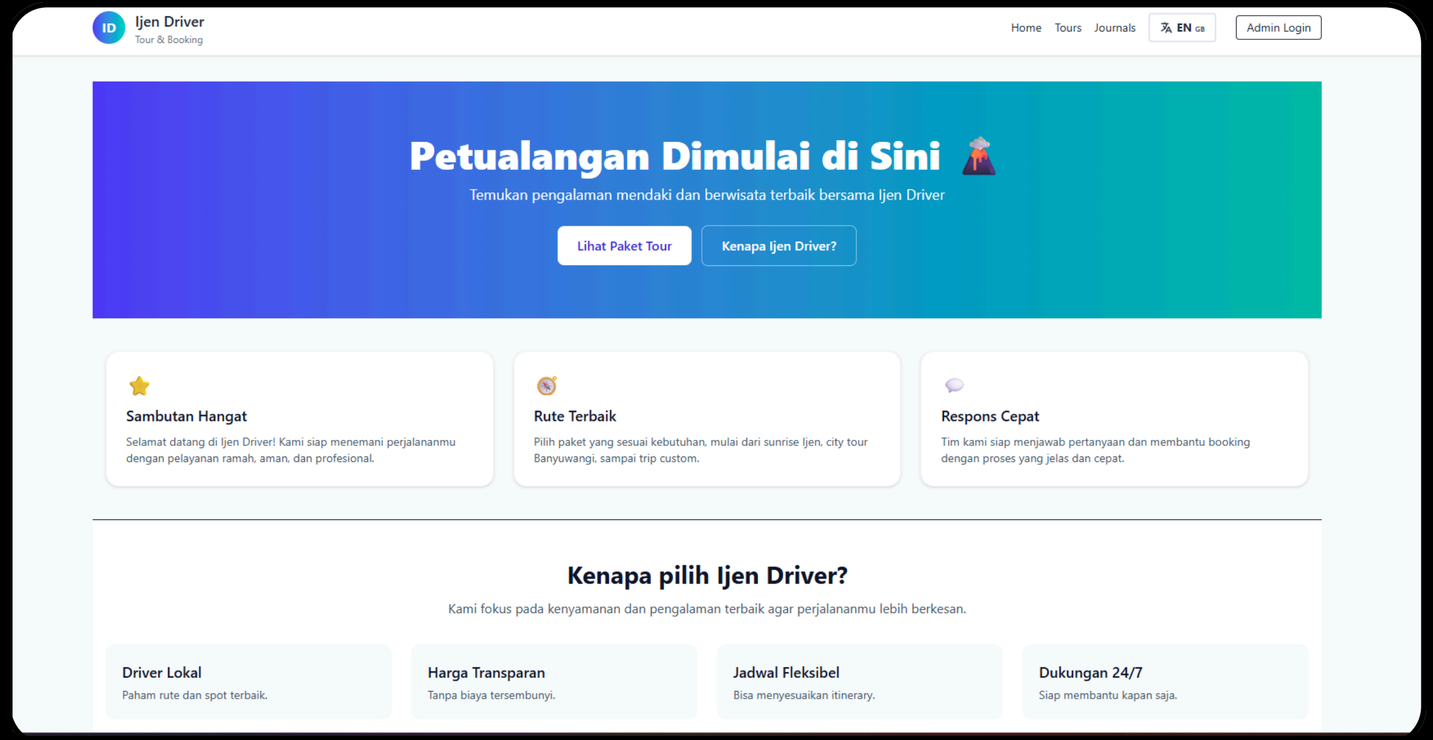
Decimatex

Decimatex is a Decision Support System (DSS) platform that automates decision analysis using MCDM (Multi-Criteria Decision Making) methods to assist students, lecturers, and others.



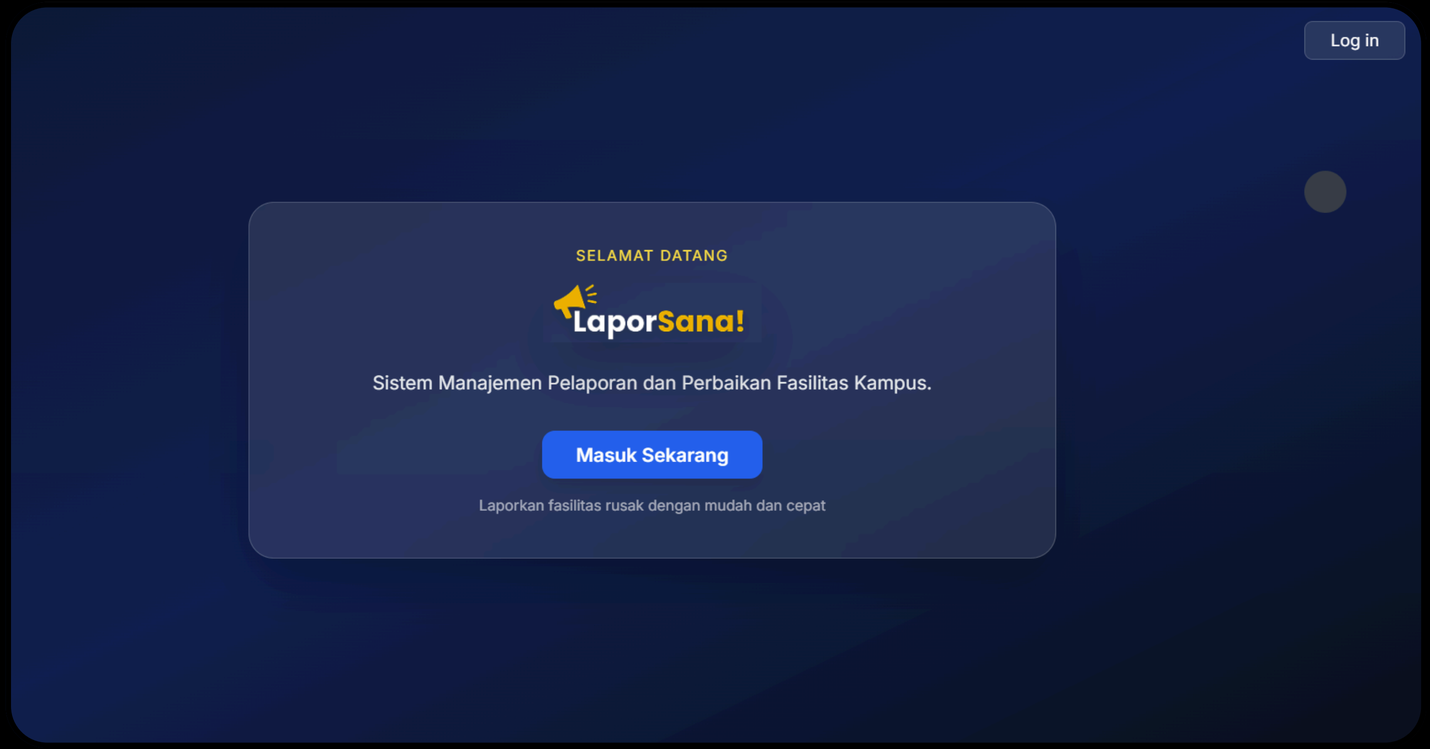
Ijen Driver

Ijen Driver is a website for booking tours desired by travelers, including both domestic and international guests. Travelers can choose destinations such as Ijen Crater, Bromo, Tumpak Sewu Waterfall, and more.



Lapor Sana

Laporsana is a website to create and manage facility problems on campus, facility improvements with the integration of a decision support system, which provides recommendations for solving existing problems on campus.



Magicaffeine Story

One day, craving the familiar comfort of coffee, you try a local brew—only to find something terribly wrong with the taste. The flavor is dull, bitter, and completely lacking the soul you once knew.Determined to bring real coffee to this strange world, you decide to open your own coffee shop. Your mission: to share the rich, delicious taste of proper coffee with the people of this new land, and maybe, just maybe, spark a cultural revolution—one cup at a time. and this project Using Unity 2D and C# for make game

RuangWarga

RuangWarga is a app managemnt citizen information system that allows users to create, edit, and delete their own profiles, as well as view and manage their profiles of other users.

Escape from Alex

Escape From Alex is a horror game where you must escape from a haunted house. I used Unity and C# to develop this game, and it was created as a requirement for my vocational school graduation.

Flora Quest

Flora Quest is a game that combines exploration, combat, and storytelling. You will fight, upgrade, and survive. The game is built using Unity and C#. It features a unique combat system, dynamic lighting, and a captivating storyline. The game is available on PC platforms. Btw This Project is made in 72 hours for a Game Jam + 2023.

Contact

Thank you for viewing my portfolio. I appreciate your time and effort as I look forward to working with you.
